

Battery Load Tester BLT600S

for batteries 12V i 6V

BLT600S is a device for testing 6V and 12V starter batteries. The tester simulates the battery load through a set of load resistors. Their selection allows you to adjust the load in accordance with the characteristics of the tested battery. The clear display allows you to present voltage changes during measurement.

Available functions:

Voltage measurement

Load current simulation

Automatic start of the device after detecting voltage, manual activation possible with a button

Representing the measurement graphically - LCD display

Self-test of the measuring system

APO function after 4 minutes

BLT600S is intended for car workshops, automotive shops, specialized battery service points and battery manufacturers and importers.

It is an essential tool at points handling complaints.

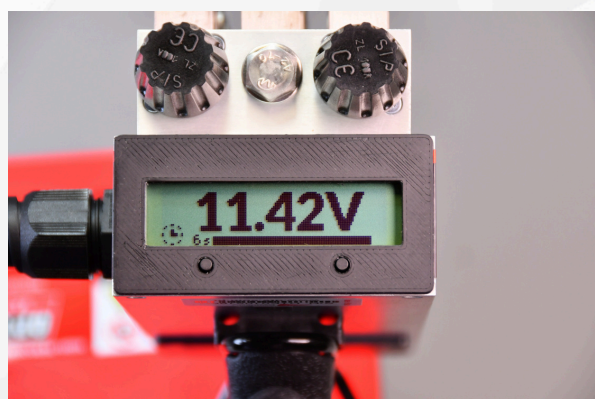

Technical parameters:

Power supply:	3V, 2 AA batteries
Range of measured voltage:	±0.5V to 16V
Accuracy:	voltage measurement $\pm (0.5\% + 2)$, set current ($\pm 20\%$)
Load current:	3 selectable values: 200/400/600A*
Working conditions:	
• temperature	-20 to 50°C **
• humidity	relative humidity < 90%, no condensation
Language versions	Polish, English
Device weight	1.8 kg
Device dimensions:	280 x 195 x 80 mm ***
Measuring cable length	70 cm (including clamp)
EAN code	5906236591808

*the values apply to a functional and charged 12V battery

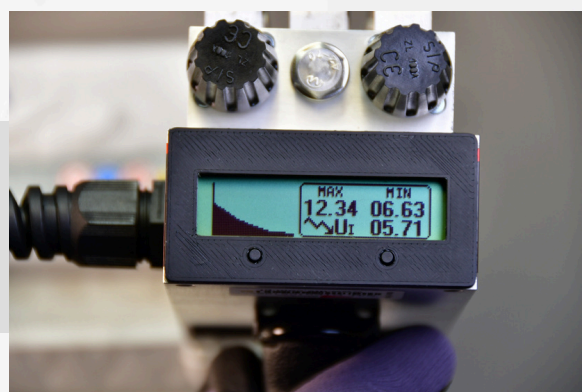

**in accordance with the battery manufacturer's recommendations

***dimensions without measuring cable

Sample measurement result from semi-automatic mode, showcasing the mode's ability to ensure repeatable measurements."

Example of a graphical representation of a battery's voltage drop when it is depleted and unable to supply adequate current."
